

## An exploded view of a handheld electronic device, possibly a small digital scale or a similar instrument, laid out on a blue surface. The device is composed of several black plastic components, including a main body, a display screen, and various buttons and connectors. A green printed circuit board (PCB) is visible, featuring a circular component, likely a sensor or a small motor, and various electronic components. A red ribbon cable is connected to the PCB. A metal ruler is placed horizontally across the top of the components, providing a scale for the size of the parts. The ruler shows measurements in inches (0 to 12) and centimeters (0 to 30).

A photograph of a disassembled mobile phone. The phone's black plastic casing is open, revealing the internal components. A large, circular, silver-colored battery is visible, with the text "3.7V 1000mAh" printed on it. A red plastic component, likely a battery terminal or a small antenna, is attached to the casing. A green printed circuit board (PCB) is connected to the battery and the casing. The PCB features a SIM card slot, various electronic components, and a small black component. A ruler is placed horizontally below the phone, showing measurements in centimeters. The phone is positioned vertically, with the ruler's markings visible on the left side. The background is a solid blue surface.
